Repeater Outputs

KA2DEW's understanding of 2m spectrum usage. This is from a central NC perspective

This is not an attempt to manifest any changes anywhere, except maybe to let other hams be aware of what the Central North Carolina TARPN is doing.

Note that the spectral usage of a TARPN does not increase with network size or density. It will increase if the quality and range of the sites goes up.

The Central NC TARPN uses 6m, 2m, 220, 440, and 920mhz. 440 is preferred because of the quantity of available frequencies. 2m is preferred because the house to house range is better.

20 TARPN packet channels

3 standard + 29 unspecified simplex

147 channels for standard repeater pairs
